Conceive, Believe & Achieve!

HVAC equipment:

A 5-ton unit seems to be what we need. We want two output levels and a 2-stage scroll type compressor. The indoor cooling coil must be matched to the outdoor unit. We are told that a round outdoor unit is less efficient than one with flat coils. Lennox xc-21 and Carrier Infinity appear to have high SEER ratings and excellent humidity control. We also want R-410-A.

We would like to see options for dehumidifiers, air filtering and outside ventilation systems. We are interested in the effectiveness of American Aldes ERV200S, Lennox ERV1, Therma-stor Ultra-Aire and Ultimateair RecoupAerator 200DX.

Main ductwork will run through a dropped ceiling and branches through the floor of the loft. We want the air handler near the center of the garage wall, near the ceiling. The main return vent is to be in the front hallway under the air handler. Ducts need not be insulated, they are in conditioned area.

.....
ROOF- I got this from Dennis at NSD:

Dome area	5040 sf
less skylights and extensions	<u>- 670 sf</u>
	4370 sf
plus 25% for overlap and cutoff	+1100 sf
plus extension roofs	<u>+ 400 sf</u>
	5870 sf
Estimated Total	59 squares

.....
INCLUDED IN DOME KIT:

struts and connector hardware; exterior sheathing (precut) and perimeter drip edge; triangle skylights #1-16; Velux egress skylights #17 and #18; stainless steel nails and fasteners;
riser walls (36" base of dome- studs, hardware and exterior sheathing);
extension arches (part of the exterior frame of the extensions).

NOT INCLUDED:

Bolts, epoxy, caulking, strapping to secure shell to riser walls to foundation.
Extension framing (except arches provided) and exterior sheathing.
All roofing materials, self adhering waterproof membrane on entire shell and extensions.
All interior framing, floors, hardware, caulking, etc.
Windows and doors listed below.
